

A hand-drawn diagram illustrating wave packet propagation. It features a series of vertical, slightly tilted elliptical shapes representing wave fronts. A straight line with a negative slope passes through the centers of these ellipses. A dashed line, parallel to and below the straight line, also passes through the centers. A curved line, concave up, is positioned below the dashed line. Arrows point from the straight line towards the curved line, indicating the direction of group velocity. The entire diagram is drawn in blue ink on a white background.
